

**AMENDMENTS TO SPECIFICATION**

*On Page 6, lines 1-5, please make changes as shown.*

The computer graphics processor further comprises a ~~color generator (not shown)~~ color generator 155 for assigning a color to said first sequence of coordinates. Therein a fetched texel can be combined with interpolated diffuse and/or specular color resulting in a color sample of the surface with associated (generally non-integer) screen coordinates which indicate where this texture sample is mapped to on screen.
